

# "ANTECEDENT ARRANGEMENTS FOR COOPERATIVE CARE IN A ZOO SETTING"

**MICHELLE SKURSKI**

Disney's Animal Kingdom

One of the main goals of behavior support programs in zoological institutions is cooperative care. These programs range from medical care and husbandry routines to guest interactions.

The wide variety of taxa involved in these programs provides many opportunities for the animal care staff to develop creativity and flexibility in setting up the antecedent environment. The speaker will discuss, through a variety of case studies, the importance of arranging the environment to make success easy for our animals.

*Speakers Time Slot*

Thursday 16th of December, 2021  
10:10PM - 10:55PM CET
